

Short, calm mathematics practice for Ontario families.

A planned full-year workbook designed for independent student practice with practical parent support.

In development

The working title, structure, timing promise, and product details remain subject to review and prototype testing.

A steady rhythm for learning and practice.

The current product plan combines concise instruction, focused practice, retrieval, application, and parent-visible progress.

For students	For families
Clear student-facing goals Worked examples where needed Focused and mixed practice Optional hints and stretch work Space to show thinking	Low-preparation routine Answers for every question Worked solutions for harder tasks Brief misconception notes Practical parent check-ins

Proposed sample-week focus

A development sample is being designed around connecting fractions, decimals, and percents, with purposeful visual models and gradual release toward independent strategy choice.

Important: the title is not yet approved for a curriculum-alignment claim. Exact mapping, educator review, mathematical verification, answer-key verification, accessibility review, and timing tests remain mandatory gates.
